

ELEVENIFIED — FINAL SYSTEM CAPABILITIES

Professional Inline Enhancements Edition

A. Worker-Facing Capabilities

1. Voice-first knowledge capture

- Workers speak in Hinglish/local mixes.
- Factory-grade audio that adapts to your environment—designed for real shop floors, not quiet labs.
- Converts speech to structured, usable text.

Enhancement Path (Worker Capture): Future improvements include stronger dialect handling, better slang recognition, and extended support for regional language variations.

2. Voice or text search for guidance

- Workers ask questions via voice/text.
- Retrieves SOP steps + tribal knowledge.
- Clear relevance-based ranking.

Enhancement Path (Search Experience): Potential improvements include adaptive ranking based on machine context, worker role, and dynamic grouping of results.

3. Factory-friendly mobile UI

- Large buttons, high contrast, glove-friendly.
- Built for dusty, noisy, low-light environments.
- Minimal typing; quick interactions.

Enhancement Path (UI/UX): More personalization, multilingual UI, and adaptive layouts for diverse factory teams.

4. Simple gamification for adoption

- Basic badges, streaks, recognitions.
- Encourages usage and contribution.

Enhancement Path (Engagement): Optional micro-coaching and skill evolution insights may be added based on worker usage patterns.

B. Knowledge Creation & Approval Workflow

5. Admin-managed SOP upload and editing

- Admin uploads SOPs.
- Sections auto-extracted for structured editing.
- Admin can edit, delete, reword sections (e.g., spindle speed changes).
- Ensures vetted, consistent formal knowledge.

Enhancement Path (SOP Editing): More flexible editing blocks, richer templates, and optional visual SOP tagging may be added in the future.

6. Worker-generated tribal knowledge

- Workers submit learnings via voice/text.
- Auto-categorized and stored as "Pending."
- Supervisors review and approve later.
- Pending entries remain searchable (clearly tagged).

Enhancement Path (Tribal Knowledge): Smarter suggestions to link similar entries and detect duplicates can evolve as dataset grows.

7. Equipment validation

- System checks if machine/line exists.
- Shows "Equipment Not Registered" when unknown.
- Prevents pollution of the knowledge base.

Enhancement Path (Validation): Context-based auto-correction and suggestions for near matches may be introduced as accuracy improves.

C. AI/NLP/ML Capabilities

8. Factory-grade speech-to-text

- Adaptive audio that learns your factory's acoustic environment for clearer voice capture.
- Understands Hinglish well.
- Outputs clean, compact text ready for extraction.

Enhancement Path (ASR): Ongoing refinement for niche accents and extreme noise conditions. Continuous tuning based on pilot deployment feedback.

9. NLP-based structuring & extraction

- Extracts steps, warnings, parameters from voice/SOPs.
- Normalizes into consistent internal formats.

Enhancement Path (NLP Structuring): Richer pattern detection and domain-tuned extraction as more pilot data comes in.

10. SOP → Knowledge Graph conversion

- Approved SOPs converted into structured, interlinked units.
- Improves search relevance and context-awareness.

Enhancement Path (Knowledge Graph): Auto-linking of related steps or cross-process dependencies may evolve.

11. Contextual retrieval & ranking

Retrieves only from local, trusted sources:

- Formal SOPs
- Approved tribal knowledge
- Pending knowledge (tagged)

No external hallucinations.

Enhancement Path (Retrieval): Advanced ranking by machine type, location, or historical patterns may be introduced.

12. Intent detection

Distinguishes between:

- Search
- Issue reporting
- Tribal knowledge submission

Asks for confirmation when unclear.

Enhancement Path (Intent): Support for multi-intent queries and smarter disambiguation.

13. Equipment validation model

- Detects mismatches or unknown equipment names.
- Prompts worker to correct or re-confirm.

Enhancement Path (Recognition): Stronger support for abbreviations, nicknames, and shorthand terms used on Indian shop floors.

D. Unified Knowledge Base

14. Centralized, structured knowledge base

- SOPs + tribal knowledge stored together.
- Each linked to equipment, processes, safety notes, etc.
- Fully searchable with role-based visibility.

Enhancement Path (Unified KB): Better conflict resolution (e.g., two entries disagreeing) and automated quality suggestions may evolve.

E. Safety, Governance & Trust

15. Role-based access

- Admins → full access
- Supervisors → review & approve
- Workers → search & submit

Enhancement Path (Roles): Granular permissions and audit logs if required by larger enterprises.

16. Data security

- Data stays internal.
- No external retrieval.
- Secure storage + controlled access.

Enhancement Path (Security): Optional SSO, VPC deployment, and offline-capable components for remote industrial zones.

17. Human-in-the-loop

- No knowledge becomes official without approval.
- Supervisors ensure accuracy and trust.

Enhancement Path (Governance): Semi-automated recommendations for approval could speed up workflows.

18. Status indicators

Entries are clearly tagged as:

- Approved
- Pending
- Rejected

Enhancement Path (Workflow): Smarter alerts for overdue reviews or conflicting entries.

F. Practical Factory-Floor Design

19. Built for Indian manufacturing conditions

- Reliable in noise, dust, oil, low light.
 - Works even on low-end Android phones.
-

20. Low cognitive load

- Minimal steps per action.
 - Large tap zones.
 - Guided confirmations.
-

21. Fast workflows

- Needs only seconds per query.
- Suitable for busy lines and multi-shift operators.

Enhancement Path (Ergonomics): Adaptive modes based on operator profile and machine type.

G. Enhancement Summary

This system is designed to evolve based on real pilot learnings. Enhancements focus on:

- Better voice understanding
- Smarter retrieval
- Richer SOP editing
- Stronger tribal knowledge structuring
- Context-aware suggestions
- Worker/L2 supervisor productivity improvements
- Optional future integrations (ERP/OEM light connectors)
